## PROJECTS

---

Full descriptive list of projects at my [website](#).

- [Telegram ChatBot](#) (Rust/PostgreSQL)

A bot that provides information about the people I volunteer with in an EMT organization. Uses the official Telegram API and runs on a Raspberry Pi.

- [Numerical Methods](#) (Python/Django/Heroku)

Web page where various numerical methods are explained and implemented with their respective graphical representations.

- [Git Implementation,  \$\mu\$ Git](#) (Rust)

Basic implementation of the most common commands and features of the distributed version-control system, Git.

- [BrianF Compiler](#) (Rust)

A toy compiler that generates, assembles and links x86 assembly instructions with the help of GNU Binutils.
