PROJECTS

Full list of projects at my [website](#).

- [GrafosOptimizacion](#) (Go/TypeScript)
A website aimed at helping students to better understand some common graph algorithms by providing an interactive and visual way of solving them.
- [Telegram ChatBot](#) (Rust/PostgreSQL)
A bot that provides information about the people I volunteer with in an EMT organization. Uses the official Telegram API and runs on a Raspberry Pi.
- [Git Implementation, \$\mu\$ Git](#) (Rust)
Basic implementation of the most common commands and features of the distributed version-control system, Git.
- [Numerical Methods](#) (Python/Django/Heroku)
Web page where various numerical methods are explained and implemented with their respective graphical representations.
