WORK EXPERIENCE

Software Developer - [Oracle \(Database Tools\)](#) May 2025 - present

- Delivered performance improvements across shared database tooling, including a **15x speedup** in SQL autocompletion and a **~67% reduction of memory usage** in SQL formatter.
- Diagnosed and resolved release-blocking bugs while **identifying performance bottlenecks** in query output formatting, **reducing execution time by ~50%** and delivering help pages and autocomplete enhancements that improved user experience.

Full Stack Developer - [Oracle \(Real Time Health Systems\)](#) October 2023 - May 2025

- Served as key contributor to a U.S. Department of Veterans Affairs task order project, expanding product capabilities with new features that **improved user experience**, while simultaneously modernizing the codebase from Java 8 to Java 17 and implementing robust testing practices for backend services.
- Identified, diagnosed, and implemented a fix for a Maven plugin bottleneck that resulted in a **99% reduction in runtime** that benefited both local development environments and CI/CD workflows across the entire organization.
- Improved developer productivity by implementing hot-reloading and mock request capabilities for our frontend code, **dramatically reducing feedback loop time by ~95%** in local builds.

Applications Developer - [Oracle \(Fusion Financials Receivables\)](#) July 2022 - October 2023

- Diagnosed and resolved critical bugs in [Fusion Financials'](#) receivables module, preventing potential financial disruptions for enterprise clients. Combined deep code analysis with accounting domain knowledge to efficiently troubleshoot and fix complex issues resulting in enhanced system stability.
- Proposed and implemented alerting system that **significantly reduced response times** for P1 bugs, leading to increased customer satisfaction.

Junior Software Developer - [Auronix](#) June 2021 - June 2022

- Identified and resolved a critical memory leak in backend services, resulting in an **80% reduction in server count**, then collaborated closely with the DevOps team to implement an auto-scaling, docker-based microservices architecture that significantly reduced cloud hosting costs.

PROJECTS AND CONTRIBUTIONS (FULL LIST AT MY [WEBSITE](#))

[ZofIA, Learning Platform](#) (Rust/React)

An educational platform geared towards assisting students in their preparation for the admission exam at a public university in Mexico (UNAM).

[Lux, A Programming Language](#) (Rust)

An implementation of a fully featured dynamically typed language and its interpreter, with a particular focus on error messages.

Grew by 20k Instagram followers in 1st month,
currently we have **~2.5k registered users**.
