WORK EXPERIENCE

Software Developer - [Oracle](#) ([Database Tools](#))

May 2025 - present

- Delivered performance improvements across shared database tooling, including a **15x speedup** in SQL LSP autocompletion and a **~67% reduction of memory usage** in SQL formatter.
- Diagnosed and resolved release-blocking bugs, identifying performance bottlenecks in query output formatting and **reducing execution time by ~50%**.
- Shipped help-page and REPL autocomplete enhancements that improved day-to-day usability for SQLcl users.
- Designed and shipped [connection import/export](#) in [SQLcl 26.1](#), enabling users to migrate and share database connections across environments.

Full Stack Developer - [Oracle](#) ([Real Time Health Systems](#))

October 2023 - May 2025

- Drove delivery on a U.S. Department of Veterans Affairs healthcare project, shipping new features that **improved user experience** while modernizing the codebase from Java 8 to Java 17 and establishing robust testing practices for backend services.
- Fixed a Maven plugin bottleneck, delivering a **99% reduction in runtime** that benefited local development environments and CI/CD workflows across the organization.
- Improved developer productivity by implementing hot-reloading and mock request capabilities in the frontend, **dramatically reducing feedback loop time by ~95%** in local builds.

Applications Developer - [Oracle](#) ([Fusion Financials Receivables](#))

July 2022 - October 2023

- Diagnosed and resolved bugs in the [Fusion Financials](#) receivables module, applying accounting domain knowledge alongside code analysis to prevent financial disruptions for enterprise clients.
- Proposed and implemented an alerting system that **cut P1 bug response times from hours to minutes**, improving customer satisfaction.

Junior Software Developer - [Auronix](#)

June 2021 - June 2022

- Identified and resolved a memory leak in backend services, driving an **80% reduction in server count**.
- Partnered with DevOps to migrate to a Docker-based microservices architecture with auto-scaling that matched capacity to demand, reducing cloud hosting costs.

PROJECTS AND CONTRIBUTIONS (FULL LIST AT MY [WEBSITE](#))

[Zofia, Learning Platform](#) (Rust/TypeScript)

An educational platform that helps students prepare for university admission exams in Mexico.

50k+ registered users, [25k+ app installs](#).

[Lux, A Programming Language](#) (Rust)

An implementation of a fully featured dynamically typed language and its interpreter, with a particular focus on error messages. Try the WebAssembly repl [here](#).

PROGRAMMING (YEARS OF EXPERIENCE)

Python(6), Rust(6), JavaScript/TypeScript(5),
Go(5), Java(4)

OTHERS

Linux, SQL (Oracle, MySQL, PostgreSQL), Docker,
Git, Redis, React, JUnit, Jest, Selenium, JFR/JMC
